

Top 10 Reasons to Choose Firebox[®] X Peak[™] e-Series

Businesses with high-speed, demanding networks need a security solution that provides the reliability, redundancy, traffic management, and port density their advanced networks require. They need a Unified Threat Management solution backed by expert guidance and support; one that simplifies network security management and that can grow with their changing business needs. Here's why the solution is the Firebox[®] X Peak[™].

1. Comprehensive Unified Threat Management

Firebox X Peak provides comprehensive security by integrating stateful packet firewall, VPN, deep application inspection, gateway antivirus, intrusion prevention, anti-virus, anti-spyware, anti-spam, and URL filtering into a single appliance – reducing the time and cost associated with managing multiple point solutions.

2. Zero Day Protection Out of the Box

Unlike products that rely solely on signature-based scanning, the Firebox X Peak scrutinizes traffic as it comes into the network for anything that does not conform to standard protocols, behaviors, and patterns. It inspects traffic at multiple layers to proactively block fragmentation and DoS/DDoS attacks, viruses, worms, spyware, trojans, and blended threats, providing Zero Day protection from attacks during the window of vulnerability before signatures can be made available.

3. Highest Performance Firebox X

For advanced networks and data centers, the Firebox X Peak offers up to 2 Gbps firewall and 600 Mbps VPN throughput. The eight 10/100/1000 Gigabit Ethernet ports support high-speed LAN infrastructures and gigabit WAN connections.

4. Advanced Networking

Firebox X Peak comes bundled with Fireware™ Pro, our advanced appliance software. Fireware Pro provides multi-WAN load sharing and interface failover, traffic management and prioritization, high availability, and dynamic routing. It allows you to intelligently manage resources while smoothly and efficiently moving traffic through the network.

5. Gateway AntiVirus/Intrusion Prevention Service

This integrated, signature-based security service scans e-mail traffic at the gateway to block viruses, spyware, and other malware. It also provides in-line protection from attacks that carry malicious content for an additional layer of protection against application exploits including trojans, buffer overflows, SQL injections, and policy violations. In addition, you can block instant messaging and P2P applications. A single subscription provides network-wide protection for all users configured behind your Firebox X Peak.

6. spamBlocker

Our spamBlocker integrated security service relies on real-time detection for immediate protection from spam outbreaks. Spam is blocked regardless of the language, content, or format of the message. It's the best service in the industry at distinguishing legitimate communication from spam attacks in real time, blocking up to 97% of unwanted e-mails. This service is sold on a per appliance basis, so one subscription covers all users behind your Firebox X Peak.

7. WebBlocker

WebBlocker is an integrated URL filtering service that enables you to centrally manage and configure where and when users access the Internet, drastically reducing exposure to spyware, trojans, and other malicious Web-based mechanisms. Configure up to 40 Web site categories to stop the sites and Web tools you most want to block. This subscription-based service is sold per firewall. Other vendors charge per user, which can be much more expensive.

8. Port Independence

Firebox X Peak comes with 10 network interfaces that allow you to create security zones to physically and logically segment your network. Any port can be configured as Internal, External, or Optional, maximizing port utilization.

9. Model Upgradeable and Expandable

As business needs change, your security investment is safeguarded by WatchGuard's unique full model upgradeability. Upgrade to any higher model within the Peak line with a simple license key. You'll have greater capacity and performance without the costs of purchasing and deploying new hardware. You can also easily add additional powerful layers of protection, including intrusion prevention, gateway anti-virus, anti-spyware, anti-spam, and URL filtering, by downloading simple license keys.

10. Intuitive Management Console

Firebox X Peak can be easily configured and managed using WatchGuard® System Manager 8.3. It provides interactive real-time monitoring, secure logging and comprehensive reporting, icon-based policy management, and drag-and-drop VPN configuration and logging – simplifying network security for the IT expert, while providing indispensable ease of use for newer network administrators.
